Endpoint Protection Feature Spotlight

Secure your endpoints,
secure your business

Streamline endpoint security and mitigate the risk of cyber threats.

Powered by Bitdefender, GoTo Resolve Endpoint Protection software safeguards your IT infrastructure against malware, viruses, and other cyberattack vectors, all from a central dashboard. Now you can protect devices and users – the easy way.

Improved efficiency

No need to manage each endpoint individually. Save time and resources by managing all endpoints simultaneously.

Increased security

Bring enterprise-class security to your business and secure every employee endpoint, regardless of their location or network.

Simplified monitoring

Review the security status of all endpoints from a single dashboard, making it easier to detect and respond to potential threats quickly.

Enterprise-class security made easy.

Full scans

Perform a thorough scan of the entire system to detect and remove any malware or viruses in the system.

Quick scans

Scan specific areas of the system quickly when time is of essence or when a full system scan is not feasible.

Update antivirus definition

Ensure all devices are up to date and protected against new malware or viruses. GoTo Resolve Endpoint Protection provides regular updates to the antivirus definition to ensure that the system is protected against the latest threats.

Turn on/off firewall

Turn on/off the firewall feature and protect against network-based attacks by preventing unauthorized access to the system.

Real-time protection

Continuously protect against malware threats with minimal impact on system performance.
