Enhanced Protection Against Advanced Email Threats for Microsoft 365

mailguard 365

About MailGuard 365:

Speed to detect and stop sophisticated email threats is the advantage of using MailGuard 365 with Microsoft 365. Integrated with the Microsoft 365 security stack for enhanced protection, it's up to 48 hours faster in threat detection. Adopting a 'Better Together' approach, it combines specialist cloud email security expertise and IP from MailGuard, with the best of Microsoft, delivering a native ICES (Integrated Cloud Email Security) solution in a single click.

UP TO 48 HOURS FASTER IN EMAIL THREAT DETECTION

Single-click activation

Frictionless activation, delivers enterprise-wide protection. No download required as MailGuard 365 is built on Microsoft Azure and is activated in the Microsoft marketplace with your Microsoft credentials. Your organization can get started with a single click, stopping advanced criminal intent email threats immediately.

Stop criminal intent emails

Traditional email security works on the outside, with an MX-record change. MailGuard 365 takes a new and evolutionary approach, working on the inside of Microsoft 365, re-scanning emails when they reach an inbox, identifying and stopping email threats like phishing, spear phishing, ransomware and CEO Fraud (BEC) attacks.

No end-user training

Designed to provide peace of mind for your end-users and your IT admins, MailGuard 365 works within the native Microsoft 365 environment with no set-up headaches or journaling to configure. Just like with M365, threats are instantly moved to users' junk and deleted items folders, so no additional training is required.

Evidence-based reporting

Complementing upstream security services like the Microsoft 365 security stack (incl. Defender) and other third-party email security vendors, MailGuard 365 takes a new approach. This means it is last to inspect emails, allowing for world-first evidence-based reporting that demonstrates its stopping power.

WHAT CUSTOMERS ARE SAYING

"If you own a mid to large tier business, you need MailGuard 365 to fortify your defenses, because if you don't, it will cost you in the long run. Too many businesses think it won't happen to them."

SNR. NETWORK ADMIN,
VICTOR VALLEY TRANSIT AUTHORITY (VVTA)

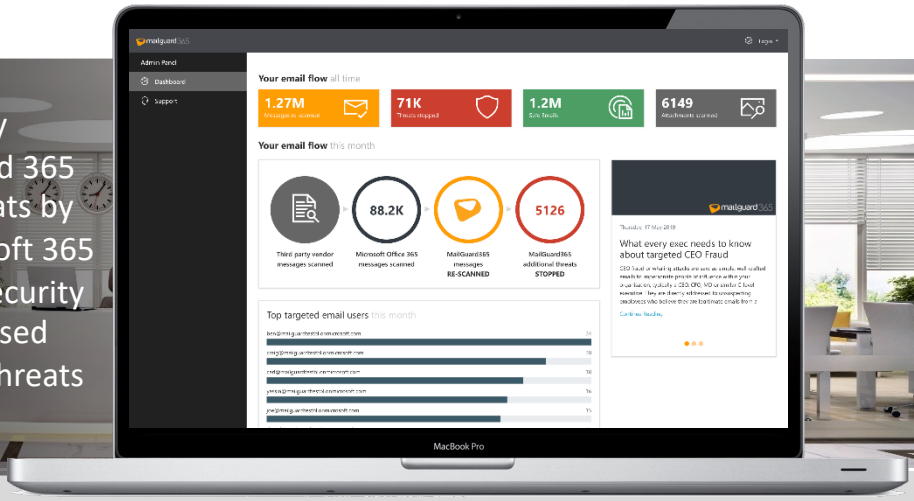
30-day free evaluation

mailguard 365

MailGuard 365

Strengthen your Microsoft 365 email security against advanced zero-day attacks. MailGuard 365 targets and stops more advanced email threats by re-scanning inbound emails after the Microsoft 365 security stack (incl. Defender) has done its security threat assessment. This enables evidence-based reporting that demonstrates the additional threats stopped to protect your business.



IDENTIFIES AND STOPS HARMFUL EMAIL THREATS

PHISHING
Protect your data, passwords, banking and other sensitive credentials that are the target of attacks by cybercriminals.

CEO FRAUD (BEC)
Stop targeted attacks impersonating C-level leaders and other people of influence within your organization.

RANSOMWARE
Malicious payloads can prevent access to systems and data, demanding ransom payments in return for decryption.

SPEAR PHISHING
Targeting key individuals, cybercriminals use social engineering to design fraudulent emails aimed at extracting sensitive information and funds.

WHY MAILGUARD 365?

Phishing, Ransomware, BEC – are things we never want to personally experience, but we hear reports everyday of email threats devastating businesses. Microsoft 365 users are prime targets, and MailGuard 365 makes life safer and easier for businesses and their users. It's the last check before your staff could make a catastrophic mistake.

ACCELERATED PROTECTION

Speed to detect and stop advanced threats is the MailGuard 365 advantage. It's up to 48 hours faster in threat detection. A pioneer in cloud email security since 2001, it combines specialist IP from MailGuard, with the best of Microsoft, stopping advanced criminal intent email threats like phishing, ransomware and sophisticated BEC attacks.

MULTI-LAYERED PROTECTION

Experts agree that a multi-layered approach to email security is required. Gartner reports that *'35% of client organizations that move to Microsoft 365 are supplementing its natively available email security capabilities with a third-party product.'* Working inside Microsoft 365, MailGuard 365 adopts a 'Better Together' approach, allowing organizations to take advantage of upstream solutions, like the Microsoft security stack (incl. Defender) or third-party vendors, with the added power of a specialist email solution re-scanning email as a last security check.

EVIDENCE-BASED REPORTING

Its unique architecture enables compelling evidence-based reporting demonstrating the stopping power of MailGuard 365, and the additional threats that have been defended.

EASY FOR USERS AND ADMINS

Operating natively in stealth within the Microsoft 365 environment, means there is no training required for end-users, and getting started for admins is super simple, with just a single click.
