Get integrated threat and data protection with Chrome Enterprise Premium

Secure enterprise browsing for the modern workforce

The browser has become the central platform for getting work done. It's where employees access business tools, collaborate with colleagues, and manage ever-evolving workflows. IT and security teams are under pressure to secure this critical endpoint without disrupting productivity, but traditional security solutions are no longer sufficient and can negatively impact the user experience.

With Chrome Enterprise Premium, organizations can access a centralized enforcement point for comprehensive endpoint security, privacy, and control across their entire network. IT and security teams can deploy advanced security capabilities with just a few clicks, protecting their workforce wherever they are.

Chrome Enterprise Premium uses a Zero Trust approach to reduce risk and keep users safe

Advanced malware and phishing protections

- The browser becomes an additional enforcement point for malware, phishing, and malicious URL defenses
- Provide a uniform layer of security control across managed and unmanaged devices, including Bring Your Own Device (BYOD) environments
- Real-time URL and file scanning helps prevent users from visiting malicious sites and downloading suspicious files

Data loss prevention

- Prevent both accidental and intentional exfiltration of company data, including information protected under compliance
- Selectively apply rules at the browser layer to prevent download, upload, print, save, and other actions on unmanaged devices
- Identify users or domains that have transferred the most sensitive data on managed devices

Security reporting and insights

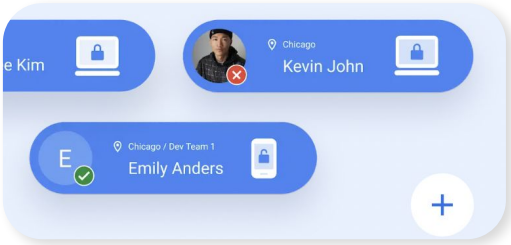

- Advanced security insights into the browser environment provide visibility into high-risk users, domains, and data protection alerts
- IT and security teams can access a record of files and data that triggered a security rule
- Supports remediation efforts, compliance reporting, and overall security hardening efforts

Context-aware access control

- Fully authenticate, authorize, and encrypt all access attempts to enterprise resources based upon device state and user credentials

Adaptive policy management

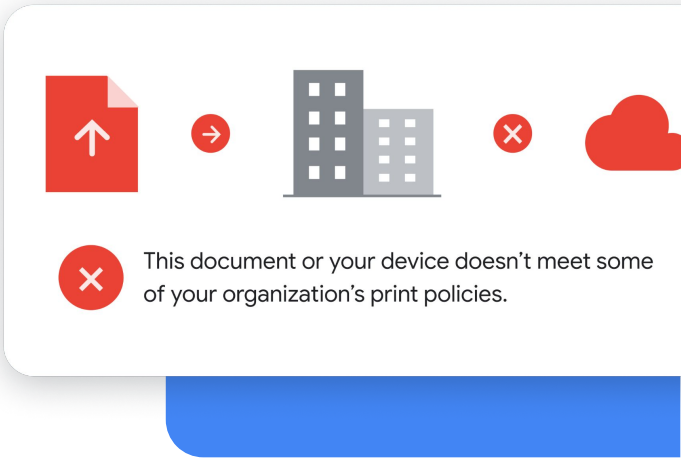

- Manage hundreds of policies centrally to ensure a secure web browsing experience for your users
- Dial up the highest degree of protection for high-risk users while maintaining the productivity of low-risk users
- No need for additional agents or complex configuration

Simplify and strengthen your endpoint security

Chrome Enterprise Premium helps modern businesses move towards a Zero Trust security architecture by addressing the vulnerabilities of the browser, an often overlooked endpoint. By centrally managing your entire browser fleet, your IT team can ensure time-sensitive updates and patches are applied across all devices and operating systems. Chrome Enterprise Premium also seamlessly integrates with the solutions your organization is already using, allowing you to build a custom enterprise ecosystem.

With built-in and scalable security, powerful management tools, and greater visibility into every deployment, your IT and security teams can use Chrome Enterprise Premium to configure browser security to a level that best suits your business.
