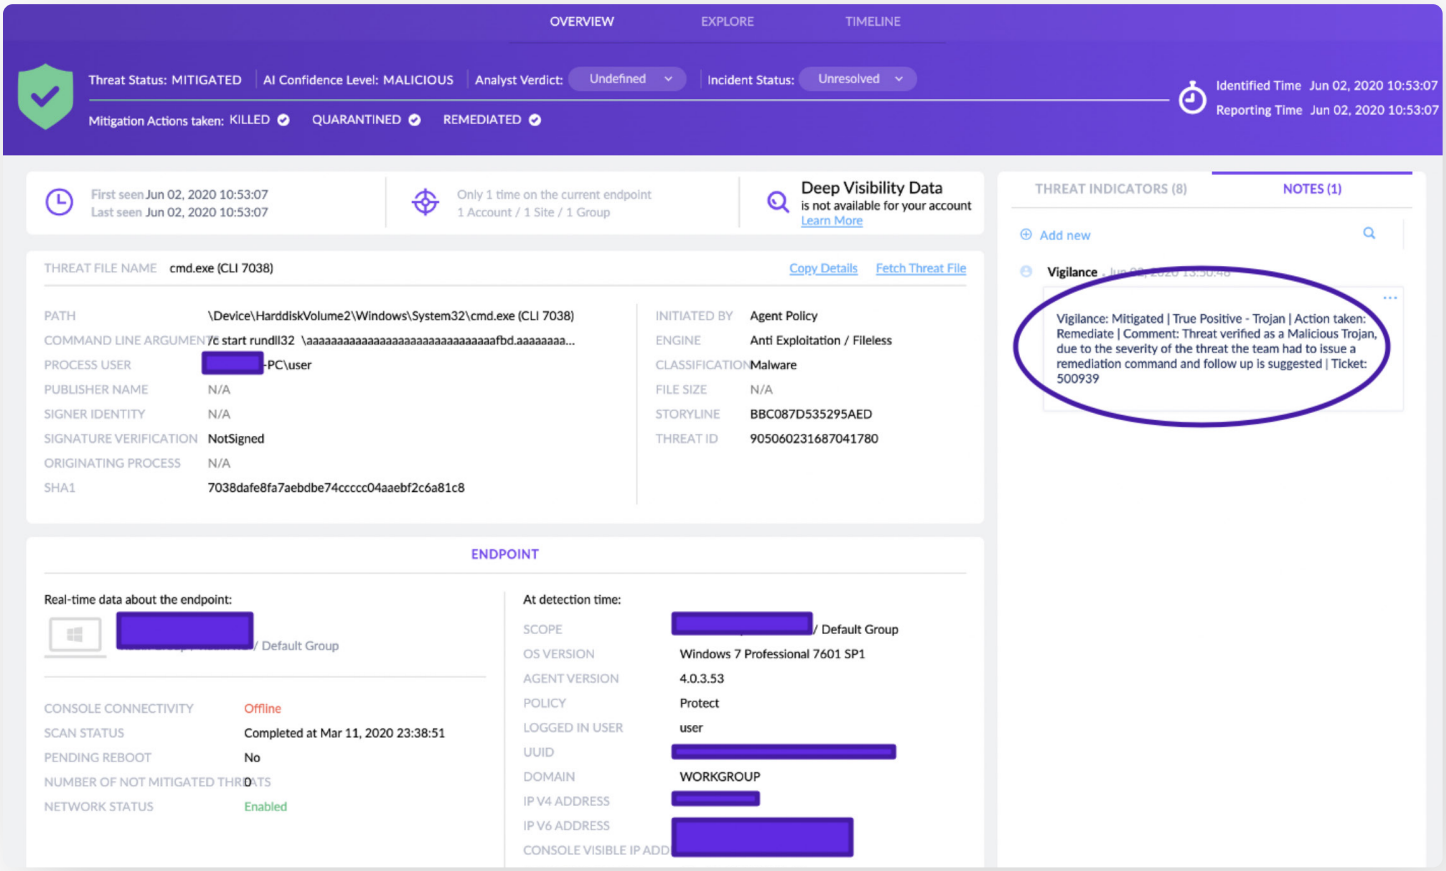
Annotations

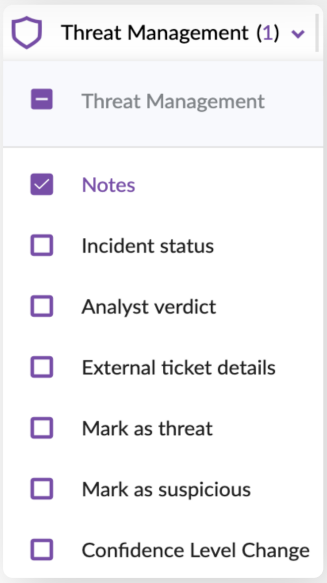
Any time Vigilance takes an action on a threat and would like to leave feedback to users, they will add an annotation on the incidents page. Typically, annotations will provide information around what was seen. Typically, annotations will provide information around what was seen. Additionally, Vigilance will provide in depth context around the specific actions that were taken.



Activities

Under Activities in your management console, there is a detailed event log of all actions and events that have taken place across the platform. You are able to trace back the remediation steps on a specific endpoint by filtering your view by migrating to "Threat Management and check marking the "Notes" option as shown:

Once that is completed, you will have a view of only Vigilance Activities.



Reporting

Available within the Console, the Vigilance Insights Report displays Vigilance threat information and activities. These reports can be scheduled or ran manually. This can be found under the Reports tab.

VIGILANCE ACTIVITIES
