About Island

Island is the pioneer and market leader of the secure browser market, redefining how modern organizations work. By embedding advanced security, IT and network controls, data protections, and application access directly into the familiar Chromium-based browsing experience users already expect, Island has created the ideal workspace. Backed by leading venture funds, Island is focused on making work flow freely while remaining fundamentally secure.

Island the Workspace for SMB

Today, businesses must balance enabling employees to work remotely across various devices with addressing evolving cybersecurity threats and managing technical debt. Historically, solving this required stitching together multiple vendors, multiple agents, and complex deployments.

Island the Workspace for SMB changes this paradigm by consolidating a fragmented technology stack — including Virtual Desktop Infrastructure (VDI), Virtual Private Networks (VPNs), Data Loss Prevention (DLP), web filtering, and password managers — into a single, unified platform. For your business, this means a massive reduction in operational complexity and IT costs, allowing you to deliver comprehensive security and productivity to your workforce through an application they already know how to use: the browser.

Technologies consolidated into a single platform	
✓ Virtual Desktop Infrastructure (VDI)	✓ Web filtering
✓ Virtual Private Networks (VPN)	✓ Password managers
✓ Data Loss Prevention (DLP)	

Core capabilities & use cases

Island equips your business to seamlessly solve its most pressing IT and security challenges:

Safe browsing & threat protection

Built-in malware inspection, anti-phishing, and URL filtering dynamically protect your team from harmful web-based threats, blocking access to risky or malicious websites seamlessly in the background.

Data protection & last-mile controls

Establish strict data boundaries to ensure your sensitive corporate information stays safe. Island natively blocks high-risk user actions such as copying, pasting, downloading, printing, or taking screenshots within your critical business applications.

Zero Trust Network Access (Island Private Access)

A complete VPN replacement. Deliver seamless, encrypted tunnels to your private and internal applications directly through the workspace, without exposing your network to the public internet.

Frictionless BYOD & contractor access

Provide a self-service, secure workspace that contractors, vendors, and remote employees can install on any device — managed or unmanaged — in minutes, without the need for complex endpoint agents or expensive VDI.

Built-in productivity & Secure AI

Island does not just secure work; it enhances it. The workspace features a built-in password manager, a smart clipboard, and a Secure AI Assistant, giving your users powerful tools to automate daily tasks while you maintain full visibility and data governance.

Why organizations choose Island

By standardizing on Island the Workspace for SMB, your organization can dramatically reduce IT costs and eliminate technology sprawl, all while providing a superior, frictionless experience for your employees.
