Unified, AI-Powered **Cybersecurity Platform**

Control the Path. Change the Outcome

Modern attacks aren't points. They're paths. Attackers cascade across identity, endpoint, email, network, cloud, and SaaS, establishing persistence as they move through the environment. As MSPs face mounting exposure across their customer base, protection now comes down to speed and efficacy.

Point tools create fragmentation across the attack path, making it harder to connect signals and act with speed and efficacy. Cynet is a unified, AI forward platform that manages the full attack path, correlates signals across identity, endpoint, email, network, cloud, and SaaS, and is backed by 24x7 MDR expertise to empower MSPs to stay faster than the adversary.

Why MSPs Choose Cynet

Natively Built Unified Security

Built to manage the full attack path across endpoint, identity, email, network, cloud, and SaaS, with shared telemetry, shared context, and coordinated response in one system.

24x7 MDR Expertise

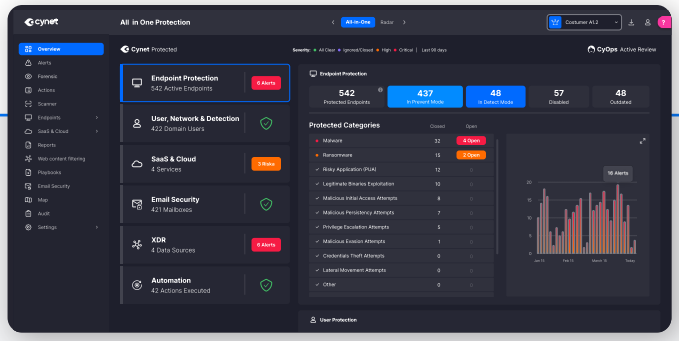

Containment is expected. What sets CyOps apart is the depth of investigation, context, and guidance MSPs get behind every incident. Staffed by experienced threat hunters working from shared context and intelligence across the platform, CyOps extends the MSP team with 24x7 MDR expertise that helps validate incidents, investigate what matters, and guide response when it counts—so MSPs are never alone in critical moments.

AI-Powered Detection & Response

Our self-learning AI engine (CyAI) detects and responds at machine speed. CyAI detects 97% of threats autonomously and remediates 90% automatically, driving faster containment with far less manual effort.

Built for MSPs

Fast to deploy, simple to manage, multi-tenant by design, and built to help MSPs protect more endpoints per technician, improve operational efficiency, and scale security delivery across customer environments.

Unified Protection Across the Full Customer Environment

Endpoints

Protects workstations, servers, mobile devices, and IoT endpoints from ransomware, malware, and advanced threats with AI-powered endpoint protection, behavioral detection, device control, and endpoint security posture management.

Automated response and 24x7 CyOps support help contain threats before they spread across customer environ

We Protect Your Networks

Detects lateral movement, unauthorized access, and hidden threats through AI-driven Network Detection and Response, Deception Technology, and continuous monitoring.

Correlated signals and autonomous response help stop attackers before they move laterally within the environment.

Email

Protects Microsoft 365 and Google Workforce environments against phishing, account compromise, malicious URLs, and advanced email attacks.

AI-driven detection, behavioral analysis, and automated remediation help stop threats before they spread laterally across customer environments.

Identities

Cynet protects users and identities potential credential theft, account takeover, and privilege abuse with Identity Protection, ITDR, behavioral analytics, and automated controls across Active Directory and cloud identity environments.

Threats are detected and contained before identity compromise escalates into broader incidents.

Cloud Environments

Secures cloud workloads, SaaS applications, and collaboration platforms against account compromise, misconfigurations, and malicious activity.

Built in CSPM, identity monitoring, and automated remediation provide coordinated protection across the full cloud environment.

SaaS Apps

Secures SaaS applications against phishing, unauthorized access, and account takeover with AI-powered anomaly detection and integrated protection for Microsoft 365, Google Workspace, and other business critical apps.

Automated investigation and response help contain threats before they spread across the environment.

Platform Capabilities

Centralized Log Management

Cynet's SIEM and centralized log management automatically collect, correlate, and prioritize telemetry across endpoints, identities, networks, cloud, and email. Built natively into the platform, Cynet eliminates the cost and complexity of disconnected SIEM tools while accelerating investigations with unified visibility, forensic context, and compliance-ready reporting. Combined with CyAI and CyOps MDR expertise, Cynet turns raw telemetry into fast, actionable security intelligence.

SOAR, Orchestration & Automation

Cynet's built-in SOAR automates investigation and remediation across the customer environment without complex integrations or external orchestration tools. From isolating endpoints and disabling compromised accounts to blocking malicious domains, response actions are triggered automatically using AI-driven detections and correlated attack-path context. The result is faster containment, reduced analyst workload, and scalable remediation.

CyOps 24x7 MDR Security Experts

CyOps is the human expertise layer behind Cynet's unified, AI-powered platform. CyOps continuously monitors environments, validates incidents, investigates attack paths, and guides remediation. Analyst decisions feed intelligence back into the platform, improving future detections, investigations, and response accuracy, delivering AI speed with human assurance.

Telemetry, APIs & Ecosystem Integrations

Cynet's unified platform is open by design, integrating seamlessly into MSP ecosystems through APIs, telemetry ingestion, and ecosystem integrations. By centralizing security telemetry into one coordinated platform, Cynet enables deeper visibility, automated workflows, and faster response across customer environments.

Right-Fit Protection for Every Customer

Cynet gives MSPs the flexibility to align protection with the managed services they offer and match the needs of every customer. This gives MSPs a flexible way to deliver protection that fits each customer's environment, needs, and service model.

Protect	Elite	All-in-One
Essential endpoint protection designed for smaller customer environments and **foundational security needs**	Endpoint, 24x7 MDR security, and automation for MSPs supporting clients with compliance requirements and **more complex security needs**	Comprehensive, 24x7 expert protection across today's threat landscape for **all managed environments**

About Cynet

Cynet's Unified, AI-Powered Cybersecurity Platform unifies a full suite of security capabilities on a single, simple solution, backed by 24x7 expert support. Cynet is purpose-built to enhance protection for small-to-medium enterprises and to maximize margins for MSPs.
