Why your clients need a password manager for their entire organization

Year after year, compromised employee passwords remain one of the most common vectors for cyberattacks and data breaches. Equipping every employee with an enterprise password manager is a foundational security measure that delivers productivity benefits for clients and MSPs alike.

Trusted by over 180,000 businesses, 1Password makes it easy for your clients to create strong, unique passwords, share sensitive information securely, and log in with a single tap or a click. This means your technicians will spend less time resetting passwords or setting up new users, creating time they can use to focus on other valuable work. It'll also help your team get an overview of your clients' security health while acting as a single source of truth for all their digital secrets.

Secure your clients by securing their credentials

Security visibility for all teams

- Get an at-a-glance view of your clients' security posture anytime by integrating 1Password with your existing SIEM tool to centralize your security solutions.
- Identify security issues, like reused passwords, compromised passwords, and more with 1Password Watchtower.

Control who has access to what information

- Save your technicians' time and resources – so they can focus on other tasks – by employing admin controls that make it easy to add or remove users, recover accounts, reset passwords, manage permissions, and even grant access to vaults for guest users.
- Keep your clients' data secure by creating separate vaults based on team, department, or need, thus limiting who has access to privileged company information.

Easy for every team member to use

- Help employees develop strong security habits, both at work and at home, with a free 1Password Families account for every business user.
- Protect every account with easily generated and auto-filled strong, unique passwords.
- Get visibility into weak or reused credentials that could put your organization at risk so they can be quickly resolved.
- Integrate with your SSO provider to quickly provision new users and give each employee access to company data all through one login.
- Help teams sign in faster so they can stay productive throughout the day, avoid potential errors and time spent in manual filling, or waiting for password resets.

1Password for your clients' entire organization

Protecting your clients starts with protecting all their people. Every team has sensitive information to store and share, so every team needs strong credential management.

Legal

A centralized and secure solution to store contracts, templates, and NDAs. Safely share confidential documents or contracts with cross functional team members for review. Use granular controls for read-only documents outside of legal.

Finance

Securely store and share documents, spreadsheet files, login credentials, and credit card details. Restrict employee access based on passwords, firewall, and 2FA policies.

HR

Safely store and share employee records, frequently used onboarding and offboarding docs, and login credentials. Limit access to sensitive employee information and only share with those who need access through specific vaults.

Marketing

Securely share pre-launch documents with external partners or contractors. Employ access controls for confidential or pre-launch files. Share logins to social media, analytics, or reporting dashboards with only the team members who need access.

1Password

Protect your clients with the password manager trusted by 180,000 businesses.
