NordStellar

GIVE YOUR CUSTOMERS PROACTIVE THREAT DETECTION

Differentiate your offering with NordStellar. Give your clients clear, actionable threat intelligence to stay ahead of cyber threats.

Partner plans by domains and assets

Our partner plans are designed for **flexibility,** allowing you to scale your services to match your clients' needs. Choose the right plan based on **the number of domains and assets** you need to protect.

PLAN	Starter	Growth	Professional	Enterprise	Strategic	Elite	Ultimate
DOMAINS	5	10	30	75	150	300	600
ASSETS	200	400	1 200	3 000	6 000	12 000	24 000

What features are included in all plans

FEATURE		DESCRIPTION
Data breach monitoring	✓	• Monitors and identifies risks from **compromised employee and consumer data,** such as leaked or stolen credentials or data stolen by malware infostealers. • Provides **real-time alerts** about compromised data and helps mitigate threats.
Dark web monitoring	✓	Tracks **company-related keywords** across dark web forums, cybercrime communities, ransomware blogs, marketplaces, and Telegram channels.
Cybersquatting detection	✓	Detects **malicious domains** that impersonate your brand or target your customers, and helps stop threats before they escalate.
External vulnerability scanning	✓	It provides an external **open port scanning** for software patching issues.
Automatic asset discovery	✓	Identifies **all internet-exposed assets associated with the organization** using techniques such as DNS enumeration, web crawling, and other OSINT methods.
Dedicated account manager	✓	Provides **direct support** and clear guidance to ensure you are using the full capabilities of the platform.
Secure file encryption	✓	Protects sensitive data by rendering it unreadable to unauthorized users, preventing data loss, and ensuring privacy.
Platform integrations	✓	Thanks to the platform integrations API, you can **connect** NordStellar's security monitoring **with your existing security tools,** dashboards, or automated workflows.
Cyber risk reporting	✓	Provides **high-level reports of identified cyber risks** affecting end-users.
Executive protection	✓	• Allows the selection of **key individuals** and monitors their **threat exposure** in real time. • Sends real-time alerts when client data appears **in breaches or on dark web forums,** enabling immediate action.
Event management	✓	The events page is a central hub providing a real-time, consolidated view of all security-relevant events detected across your monitored assets.
Real-time alerts	✓	You will receive ***immediate*** notifications when your monitored assets are detected with an informational risk level (not critical) or are compromised.
Data export	✓	It enables **easy exporting of all the tables,** e.g., vulnerabilities or domain squatting tables, the credentials from data breaches, malware infections, and combo lists, into a single CSV file.
Role-based access management	✓	• Lets you create **distinct access roles** for your team members. • You can also grant them **specific permissions** within your organization and on a per-project basis.
Multi-tenancy system	✓	With a multi-tenancy system, you can create **separate projects for different organizations,** making organizational management much more fluid.
Risk evaluation	✓	Provides **risk levels** based on an event type, severity, potential impact, and exploitability.
Professional services*		*Only available with an enterprise-grade service.
Enterprise APIs (10,000 calls/ month)**		**Not available at the moment.
MFA & SSO***		***NordStellar supports MFA. However, SSO is not available at the moment.

SECURE YOUR CLIENTS

NordStellar

Add **NordStellar's threat exposure platform** to your security offerings. Help your clients mitigate external risks—from dark web threats to data breaches and simplify their compliance efforts.
