Smarter backup for SaaS data

The most complete backup solution for SaaS data

Smarter, simpler and safer backup and recovery for Microsoft 365, Google Workspace, Xero, Salesforce and QuickBooks direct from the cloud to Redstor. Recover malware-free and mitigate the risk of ransomware, user mistakes, malicious behaviour and sync or configuration errors, all of which threaten productivity and business continuity.

Why third-party backup is essential for critical SaaS data

Most cloud platform providers do not automatically backup data, including the Microsoft, and even those that do advise that a secure, third-party backup is taken to ensure against data loss, corruption and other threats.

It's critical to remember that retention policies may not always cover data protection requirements, and threats like ransomware can still damage data even when stored in the cloud.

Unable to recover accidentally or maliciously deleted cloud data?

Need more flexibility with retention periods?

Want to centrally protect a wide range of sources via a single app?

Scared about the impact of ransomware on your cloud and SaaS data?

Deploy and scale backup cost-effectively, with ease

Back up direct from the cloud to Redstor's cloud in minutes. Scale protection instantly, infinitely, and securely with no hardware and no impact on local bandwidth.

Benefit from immutability

All data is stored in an offline state which is fixed, unchangeable and cannot be deleted. All backups are separate and cannot impact each other.

Manage sensitive data

AI woven into Redstor's app automatically identifies whether backed up data should be classed as highly sensitive or sensitive, enabling management of the concentration and exposure of sensitive data, facilitating protecting it more effectively – again, for no additional charge.

Get protected on day 1 with zero upfront costs and end-to-end online onboarding that takes minutes.

Cloud backup and recovery. Only smarter.
Smarter cloud backup, with zero hardware required, delivering the broadest coverage of data sources from a single app and lightning-quick recovery of any files on demand.

Smarter recovery.
The only cloud-first backup with on-demand recovery of files and databases, in an instant. Redstor's proprietary InstantData™ technology enables recovering entire systems in moments, with a seamless user experience that allows users to get back to work almost instantly, streaming what they need, when they need it.

Smarter management.
Smarter backup, including the broadest coverage of data sources, through a single app, able to be set up in under 60 seconds. Save time, hassle and costs with no hardware requirement and the ability to manage everything centrally, from anywhere.

Outsmart cyber threats
Redstor's proprietary, AI-powered, malware detection technology neutralizes threats before they become attacks. Scanning all existing backup data, it isolates, quarantines and flags any suspicious files for review, and thanks to community insights, the solution gets better every day.

Ready to try the smartest backup and recovery platform?

Redstor is available through a worldwide network of authorised partners. Speak to your service provider today about Redstor or get in touch with a member of the team at Redstor to get set up with a trial and be put in touch with an authorised partner.
