

DATA SECURITY MADE SIMPLE

Actifile's game-changing autonomous data security platform, designed for Small & Medium Size Enterprises (SMEs) and their MSP partners, protects sensitive and private data from malicious actors, theft, and negligent employee carelessness in a Cloud and perimeter-less world.

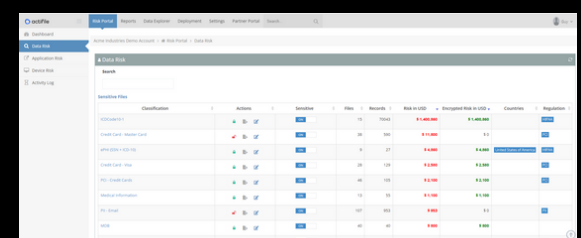

Actifile Cloud Platform scans sensitive data leveraging smart patterns, quantifies data risk in dollar value amount, monitors and audits data risk in real-time, tracks incoming and outgoing sensitive data flows from the perimeter-less organization, and then protects sensitive data with automatic, transparent encryption (Patent allowed), across endpoints, cloud apps, 3rd party portals and shadow IT. Actifile's solution not only preemptively protects sensitive private data, but also transitions the data to safe harbor, and helps SMEs to comply with all state, federal, and global data privacy regulations.

BENEFITS

CAPABILITIES

Comprehensive: From Discovery all the way to Automated Encryption in one product	• Data Discovery • Data Risk Quantification in monetary value • Data Flow Monitoring • Data Risk Audit • File level Encryption (at rest and in motion) and Decryption With comprehensive real time coverage across endpoints (Win, Mac, Linux), File Servers (Win, Linux) NAS, Microsoft 365 and Shadow IT and 3rd party cloud apps
Preemptive Approach providing peace of mind, by leveraging Automatic Encryption	• File level encryption secures sensitive files from ransomware stealing data: If the file is stolen, it will not open without Actifile agent and the organizational decryption key (unlike DLP) • File level encryption secures sensitive files from negligent employees exfiltrating files to shadow IT and 3rd party apps. With a preemptive approach, making sure the files are automatically encrypted once created, without trying to block events (Like legacy DLP)
Short time to value: Be up & running in 3 days!	• Pre-configured data discovery patterns, for PII (multinational), US CUI and other business sensitive data • Cloud management console with 1 single pane of glass. No on-premises server required • 1 Click action to encrypt sensitive data, across all file types and locations, in real time by content, file folder or specific file types. Be up and running in days rather than months
Easy and intuitive suitable for IT admin at all levels	• No data security expertise needed, any IT admin can deploy, monitor and protect data • Contextual encryption simplifies remediation process, by encrypting risk types (. e.g., 1.6 M USD for files with credit card numbers) • Built in PDF and Excel based reports • Standard APIs for Integration with 3rd party management systems, like SIEM or SOC
Works behind the scenes, with no disruption to users' day to day work	The only Data Security solution that doesn't disturb the users day to day: • Transparent decryption w/o user& password and with no latency, of any encrypted file in any location • Multiple ways to enable sharing encrypted files externally: ◦ Delayed encryption, enabling automatic delay per risk type of encryption start ◦ Defining specific out going communication channels (. e.g., organizational email) ◦ Defining specific folders for decryption with designated access level

Actifile Sensitive Data Classifications

Classification	Actions	Amount	Size	Name	Risk in USD	Remediated Risk in USD
Cardholder - Internal Card	✓	25	100		\$1,400,000	\$1,400,000
Cardholder - External Card	✓	5	27		\$1,000	\$1,000
Cardholder - Visa	✓	25	100		\$1,000	\$1,000
PII - Credit Cards	✓	40	100		\$1,000	\$1,000
PII - Credit Cards	✓	10	50		\$1,000	\$1,000
PII - Social	✓	100	100		\$1,000	\$1,000
PII - Social	✓	40	40		\$1,000	\$1,000
