QuickBooks Backup

Protect vital QuickBooks Online & Desktop data against loss due to ransomware, human error, and other threats with Redstor's QuickBooks Backup.

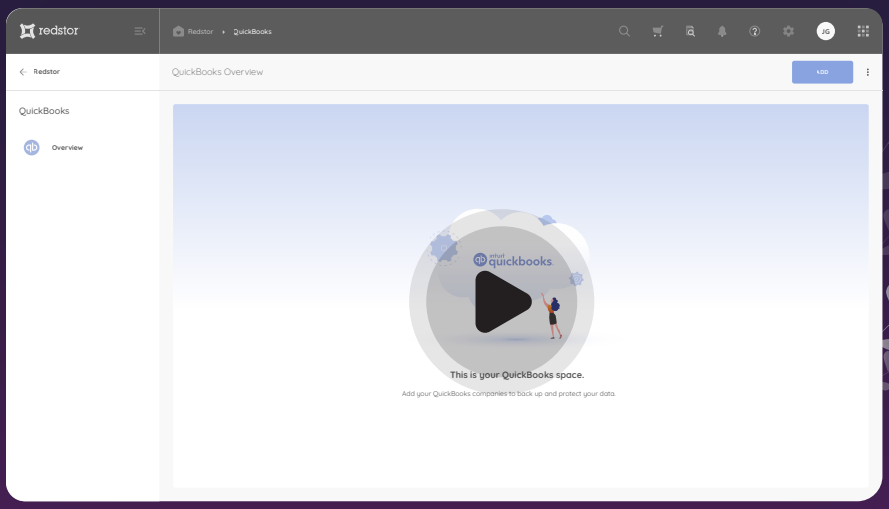

QuickBooks is the beating heart of around 80% of small & medium-sized businesses, used to track sales, inventory, financial accounts, and payroll from a single dashboard.
Intuit clearly state in their T&Cs (6.1.1) that:

You are responsible for any lost or unrecoverable Content. You must provide all required and appropriate warnings, information and disclosures. Intuit is not responsible for any of your Content that you submit through the Services.

Despite this, many organizations leave it unprotected and at risk.
If your customers lost access to their QuickBooks data:

- How would they know who has paid for a product and what they were charged?
- How would they know what to submit for their tax accounts?
- How would they pay employees or track their expenses?
- How long would it be until they were again able to accept transactions?
- What would the cost be to their business?
- What would the impact be on their relationship with their backup provider?

See it in action

Key benefits

A safety net

With multiple people using QuickBooks online, more than one person can have access & make changes to the same items simultaneously, amplified if external teams are involved as well. Mistakes happen, so it's important that QuickBooks files are backed up to guard businesses against these mistakes. Redstor's QuickBooks backup give admins a safety net - instant, granular item restore means customers can fix anything that might go wrong.

Save time & money

A major source of data loss can stem from finance team making changes to the production environment in QuickBooks (year-end changes, mergers & acquisitions etc). With Redstor's QuickBooks backup, admins can use backed up, real data, in their sandbox, to verify & validate any changes before pushing those changes to their production environment.

Good business practice

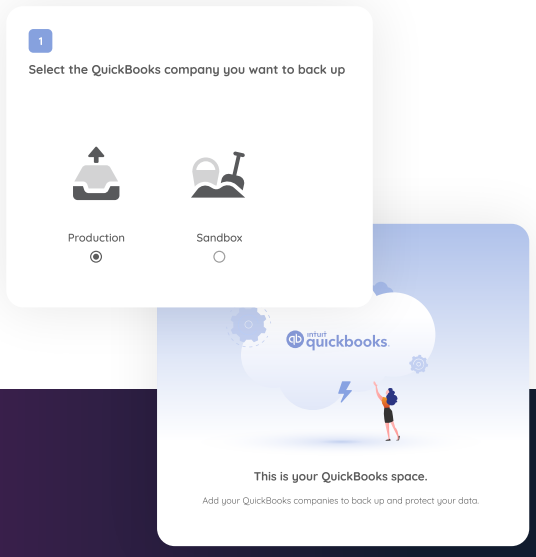

Intuit (like lots of other vendors) operate a shared responsibility model, where QuickBooks customers are protected from incidents such as total platform outages, but not protected from everyday threats like ransomware, malicious or accidental data deletion/loss. Automatic backups & on demand backups, means businesses can set the first backup running in seconds and can take extra backup whenever they need.

Simplicity & Low TCO

QuickBooks Online backup & data restoration requires QBO customers to provide & manage external storage to backup QuickBooks data. Redstor's all-in-one solution means your data is safely protected, in expert hands every step of the journey.

Comply with regulation & policies

Businesses can stay compliant with industry standards, such as IRS 4557 & SOC2 by backing up QuickBooks with Redstor. In a highly regulated industry, it is vital to keep all risks to a minimum, an independent backup and recovery platform is the easiest and most cost-effective way of doing so.

Single user interface

Customers benefit from having a single user interface to protect and manage all their data sources, from cutting edge, cloud native infrastructure (Azure & AWS), through to the major SaaS sources including M365, GWS, Salesforce, Xero and even including legacy backup sources such as on-prem servers, & company laptops.
