Don't Be Victimized by a Cybercrime

Chances are, your data is already on the dark web.

- Cybercrime is the #1 crime in the world
- 95% of all data breaches are caused by employees
- On average, a cyber attack occurs every 39 seconds
- Your employees are the weakest link in your security

What can you do?

- Run frequent dark web breach assessments to see which of your users have been compromised
- Change all breached user passwords

Turn Your Weakest Link Into Your Strongest Defense

- **Dark Web Breach Assessments** - Scan your domain to see a list of compromised users.
- **Simulated Phishing** - Phishing campaigns test your employees to show which ones need additional training.
- **Employee Vulnerability Assessment** - Identify security gaps within your organization, and provide targeted training.

- Enable enhanced security
- Continuous training and End User education
- Test employee retention with simulated phishing attacks and assessments

With over 800 million phishing attacks in 2018, and over 300K new malware threats created each day, your users are constantly at risk.

Equip your users with the education and skillset needed to recognize and stop attacks.
