Pax8 and Microsoft Playbook:

A blueprint for your Microsoft journey

Microsoft and the shifting landscape of modern work

Microsoft is the cornerstone of modern business technology. In recent years, businesses of all sizes had to find ways to enable remote collaboration while keeping their workers and data secure as the world shifted rapidly to remote work on a global scale. Today, as artificial intelligence (AI) transforms the workplace once again, businesses of all sizes are looking for ways to integrate AI into their workflows to increase efficiency and remain competitive. The integrated nature of the Microsoft stack is foundational to making AI a natural part of the workday by folding generative AI and other AI capabilities into existing applications to generate instant insights and accelerate productivity. To stay relevant, it's vital for IT providers and technology advisors to build a comprehensive Microsoft technology stack that includes AI while maximizing the potential of their Microsoft program participation.

36% of organizations have dealt with a security incident due to an unsecured remote worker¹

70% of employees are willing to delegate some work to AI²

How Pax8 enhances your Microsoft experience

Growing your Microsoft practice is easier than ever with The Pax8 and Microsoft Playbook. We simplify your Microsoft experience to make it easy to adopt in-demand Microsoft solutions, optimize your Microsoft program, and find opportunities to sell more – all while streamlining the management of your complete cloud tech stack.

- **Expertise** to help you earn more margins, optimize incentives and rebates, and keep up with program and product changes.
- **Modern Marketplace** to easily manage your licenses with consolidated billing, instant provisioning, and integrations with your preferred PSA tool.
- **24/7 technical support** to quickly resolve your Microsoft issues with in-house Pax8 engineers – reducing the need to escalate tickets to Microsoft.
- **Professional Services** to help you deploy Azure, harden your Microsoft environment, roll-out remote work tools, and more.

Pax8 and Microsoft Playbook:

A blueprint for your Microsoft journey

Whether you're brand new to Microsoft or already purchasing through another distributor, Pax8 can effortlessly move your seats today. From expanding your existing Microsoft clients and migrating on-premise clients to landing net-new clients, Pax8 enhances your entire Microsoft experience so that you can make more possible for the modern workplace.

Accelerate cloud migration and achieve digital transformation

Enable remote work collaboration

Secure remote workers and ensure business continuity

Power business apps to drive data-based decisions

How to maximize every step of your Microsoft journey with Pax8

1. Guide clients toward digital transformation with Azure and by migrating from on-prem to M365.
2. Standardize integrated communication and collaboration solutions for remote work, such as Microsoft 365, Microsoft Teams, and Teams Phone solutions.
3. Tell a story about reducing risk (especially in remote work environments) with the security and business continuity features of M365 and Azure.
4. Power modern workflows and data visualization with custom business apps and dashboards through Dynamics 365 and Power Platform.
5. Margin up by offering managed services to harden Microsoft environments, secure remote workers, deploy Azure Virtual Desktop, and build custom apps – Pax8 Professional Services can augment your team on Microsoft projects and services.
6. Expand your team's expertise through education, skilling, and certifications.
7. Advance even further with Azure marketplace and optimize your Azure practice by leveraging Reserved Instances, Azure Hybrid Benefit, and Data Center Optimization.

Stay up-to-date

Strategically expand your tech stack

Our partner-focused events help you build on your Microsoft foundations with solution-focused sales advice for adding in-demand productivity, infrastructure, communications, continuity, security, and network solutions to your stack.

M365: Remote work and security

Only 4% of businesses have sufficient security for all of their data in the cloud ³

Designed for the needs of small- to mid-sized enterprises, Microsoft 365 Business Premium offers a single, integrated technology solution that combines the Office productivity apps users know and love with granular device management and best-in-class security features.

Empower remote teamwork: With Microsoft Teams as a collaboration hub, M365 empowers your clients to work from anywhere, while Azure Virtual Desktop (AVD) protects remote workers' data and devices by allowing them to work securely on a virtualized Windows 10/11 desktop.

Defend data, documents, and the inbox: Advanced security features add a layer of defense against cyberthreats to protect business data, files, and emails.

Control and protect devices: The device management capabilities of M365 simplify device configuration and deployment, allow full control of company-owned mobile devices, and protect company data on personal devices.

M365: Remote work and security

Microsoft Teams

Over 30 billion collaboration minutes per day³

Teams Phone is a modern cloud-based telephony add-on to Microsoft Teams that enables you to make and receive calls from anywhere, on any device. Together, they deliver an all-in-one communication solution.

- Cloud-based phone system for reliable and secure calling across your computer, mobile device, and/or desk phone, with advanced features such as call transfer, auto-attendants, and call lines.
- Built-in audio conferencing with a dial-in number for up to 250 people per meeting.
- Customize your calling plan - get a new number or migrate existing ones (or bring your own calling plan)

Who can benefit from using Teams Phone solutions?

Teams Phone is a great fit for employees who do a lot of external dialing, such as sales reps or teams who often need to interface with external clients and partners, and any organization that wants their communication conveniently in one central tool.

Solutions

Microsoft Teams Premium: Enhanced collaboration and AI

Microsoft Teams Premium is designed to elevate your collaboration experience with advanced features that bring AI into the fold. Here's what it brings to the table:

Intelligent meeting recaps:

- AI-powered recap automatically provides a comprehensive review of your meetings, helping attendees and those who missed meetings stay informed
- Features include meeting notes, recommended tasks, and personalized highlights
- Notes allow you to see key points and takeaways after the meeting
- AI-generated tasks and action items are suggested for efficient follow-up

Efficient meeting recordings:

- To help navigate lengthy meeting recordings, Teams Premium introduces personalized timeline markers:
- These markers show when your name was mentioned, when screens were shared, and when you joined/left the meeting
- Speaker timeline markers organize who spoke during the meeting
- Soon, Teams will automatically generate meeting chapters for easy navigation

Live translation and captions:

- Teams Premium offers live translation for captions, breaking down language barriers
- Live captions are available in over 30 languages

Enhanced security and compliance:

- Teams Premium provides advanced security features to safeguard confidential information shared over Teams
- Features include end-to-end encryption for meetings with up to 50 attendees, control over who can record, preventing copy/paste in meeting chats, and the ability to block incoming chats from people in the organization
- Security features cover meetings, chats, calls, and file sharing

Expanded meeting capabilities:

- Larger storage space (up to 10GB per user)
- Larger meeting sizes (up to 300 participants per meeting)
- Collaborative annotations in Teams meetings
- Hundreds of collaborative apps to enhance productivity

Teams Premium is ideal for businesses with complex collaboration needs, while Teams Essentials provides basic communication and collaboration tools. Work with your team at Pax8 to choose the one that best suits your organization's requirements.

Azure: Unlock the power of Cloud Services

Resource article: selling guide,
pricing calculator, training

Microsoft Azure is a growing collection of integrated cloud services used to build, deploy, and manage data and applications through Microsoft's global network of data centers. With more than 90 compliance certifications, including ISO, HIPAA, IRS, and ITAR, Azure also streamlines data compliance.

If your customer stores data in an on-premise or legacy system, or if they need a better way to analyze data from current cloud applications, migrating those workloads to Azure creates a new revenue stream for you and a single source of truth for mission-critical business data. Unfortunately, data migrations can be costly without the right tools or expertise. Pax8 can help you simplify the complexity of Azure, with its 20,000 SKUs and usage-based billing model, and deliver an Azure solution that's rightsized for you and your customers.

Adopt and unlock the power of Azure through Pax8

Pax8 has the deep Azure expertise necessary to help you develop an Azure practice. Our two-day Azure Bootcamps help partners navigate the complexities of adopting and selling Azure, while the Pax8 Marketplace simplifies Azure management through:

- Predictive cost analytics calculates data to enable optimization of techniques and strategically lower costs.
- Threshold management notifies you when approaching customized, consumption-based thresholds.
- Detailed billing shows your clients' granular billing data.

Additionally, Pax8 Professional Services can assist you with any Azure deployment, AVD implementation, or data migration project. With the help of our team of cloud infrastructure architects, you can leverage the power of Microsoft Azure with your clients to ensure regulatory compliance and improve data governance.

- Extend on-premise Active Directory to cloud-based Active Directory
- Enable MFA & SSO through identity management
- Migrate existing or new data and servers to Azure and modernize cloud environments
- Leverage Azure for disaster recovery and backup
- Harden Azure with Azure Defender for Servers
- Design and architect Azure environment
- Choose the right Azure Virtual Desktop solution for your customers and build go-to-market strategies

Azure: Going further with virtual desktops and incentive options

Azure Virtual Desktop (AVD)

Shape LineAVD enables central management and security of users' desktops by creating Windows 10/11 virtual desktops in Azure, allowing end users to work remotely with a secure connection and securely store data in the cloud rather than on their local device. (M365 already includes the required user licensing, so only computing resources need to be provisioned and paid for in Azure.) AVD separates the computer environment from user devices, greatly reducing the risk of confidential information being left on a personal device.

Azure reserved VM instances and Azure hybrid benefit

Partners can realize major discounts on virtual machines (VM) by moving from a pay-as-you-go model to one-year or three-year commitments on reserved VM instances (RIs). By reserving VMs in advance, you can better manage costs across predictable and variable workloads – improving your forecasting with a single upfront payment or lowering your upfront cash investment with monthly payment options. You'll still have the flexibility to exchange or cancel reservations should your needs evolve.

You can achieve even deeper discounts by stacking RIs with Azure Hybrid Benefit, which allows you to maximize license investments by utilizing existing on-premise Windows Server licenses or purchasing them through Pax8 for your Azure deployment.

Pax8 Infrastructure Solutions Consultants can help you select the right VM solution to achieve the greatest savings, determine when RIs and Azure Hybrid Benefit are relevant to your project, and build go-to-market strategies.

Data Center Optimization (DCO) program

Partners with a mature Azure practice and an upcoming data center migration project should look into Microsoft's Data Center Optimization program through Pax8. This program helps partners reduce cost and risk, and accelerate migrations to deliver client success. Participants commit to an Azure revenue spend to gain the benefits of:

- Significant offers and incentives
- Engineering escalation support
- Azure deal support and review
- Microsoft tools for building deals, aligning workloads, and planning migrations

If you're interested in the DCO program, reach out to your Pax8 account manager to qualify.

Business Apps: Power Platform

With the process automation capabilities of the Microsoft Power Platform, you can now take direct control of workflows and customize solutions for your clients' business challenges. With pre-built templates, 275+ connectors, and "record, point, and click automation," Power Platform enables you to easily build apps, automate workflows, and analyze data to activate digital selling and drive data-based decision-making across all departments.

Power BI creates dashboards for powerful data visualization.

Power Apps makes it easy to modernize processes by building apps with little or no code, across any system (on-premise or cloud) on the platform they use today.

Power Automate improves productivity and reduces manual processes with workflow automation.

Power Virtual Agents helps businesses respond rapidly to customer and employee needs – at scale – using intelligent chatbots.

2-day Dynamics Bootcamp

Business Apps: Microsoft Dynamics 365

Microsoft Dynamics 365 offers your customers a portfolio of intelligent applications that deliver both operational efficiency and better customer experiences. It combines elements of customer relationship management (CRM) and enterprise resource planning (ERP) with productivity applications and AI capabilities so organizations can increase efficiency without increasing complexity or costs.

Dynamics 365 Business Central delivers cloud accounting and ERP capabilities to help manage departments across a small to medium-sized business (SMB). It offers real-time business reporting and analytics and native integrations with Microsoft 365 tools.

With our recent acquisition of Dynamics services company Bam Boom Cloud, Pax8 helps you launch your Dynamics business with our KickStart™ implementations that can help you implement Business Central within as little as a week—learn more [here](#).

Dynamics 365 Sales empowers sales teams by giving them AI-powered automation capabilities and insights into their workflows. Sales teams can use Copilot to summarize and write emails using their customer data and utilize AI-based scoring models. They can also prepare for improved customer engagements with summaries and suggested actions, forecasts, and guide sales activities.

Dynamics 365 Customer Service gives agents the capability to resolve customer issues faster by using generative AI and automation. Copilot can help agents quickly diagnose, troubleshoot issues, and draft customer responses. AI-powered chatbots enable self-service, while service operations get a boost from omnichannel, AI-driven insights.

Services

Professional Services for Microsoft

For Microsoft projects that are too time-consuming or complex to tackle alone, partners can take advantage of Pax8 Professional Services, the technical enablement arm of Pax8. We help our partners grow their Microsoft businesses, increase efficiencies, and reduce risk through the expert delivery of Microsoft deployment and migration services. Pax8 Professional Services is designed to add scale, capability, and experience to your team in an on-demand fashion.

M365 enablement

Modern Workplace

- Mailbox Migration
- SharePoint Migrations
- Teams Phone System Implementation
- Tenant to Tenant Migrations

Microsoft Dynamics 365

- Implementation of Business Central and Sales
- Support, maintenance and training on the system

Microsoft Azure

- Azure Virtual Desktop
- Server Migration (lift existing infrastructure to Azure)
- Data Migration (lift files, databases, etc. to Azure)
- Environment Modernization (build fresh infrastructure in Azure)

Microsoft Security

- Microsoft 365 based security
- Pre-optimized, CIS Control aligned implementations for Intune, Entra ID, and Defender for Office

With Pax8 Professional Services, you can get your customers' data in the Microsoft ecosystem and build on industry security best-practices for AI. Our partner-first and channel-exclusive team of certified experts empowers you to deliver greater business outcomes for your customers.

Optimize and enhance

Technology for social impact

To help partners deliver affordable and innovative cloud solutions and drive digital transformation for eligible not-for-profit organizations, Microsoft has donations and discounts available for M365, Azure, and Dynamics 365 licensing, as well as training and resources to help them succeed.

This is a huge opportunity for MSPs to grow their businesses while doing good. 77% of nonprofits say technology has helped them be more efficient or better work toward their mission, but 55% see the need to invest more in technology to increase fundraising.⁵

Pax8 is dedicated to helping partners grow while doing good in the nonprofit space, and more than 3,000 Pax8 partners have seen success by supporting nonprofits. As part of Microsoft's Tech for Social (TSI) Program, Pax8 offers grants and discounts on more than 70 cloud solutions, including Microsoft 365, Power Apps, and custom-built solutions for nonprofits with Dynamics 365.

Microsoft solutions for nonprofits

- **Microsoft 365:** improve cybersecurity, reduce costs, and empower nonprofit staff and volunteers to easily work on their initiatives from anywhere.
- **Azure:** optimize costs and rapidly scale nonprofit operations while improving operational stability and network resilience.
- **Dynamics 365:** engage donors and volunteers and manage organizational operations with business applications powered by AI-driven insights.

Your Microsoft experts

Why Pax8?

Pax8 enhances and simplifies your Microsoft experience with our modern Marketplace, in-house expertise, and 24/7 US-based technical support.

We've made Microsoft (and everything cloud) so straightforward that it's easy to see why thousands of MSPs and IT service providers across the globe are switching to Pax8.

A modern partner experience

Pax8 simplifies the way organizations buy, sell, and manage cloud solutions, empowering our partners to achieve more with cloud technology. Our born-in-the-cloud marketplace modernizes the channel's cloud journey with consolidated billing, automated provisioning, and industry-leading PSA integrations. And our technology is backed by our world-class partner experience that provides responsive support alongside the education and resources you need to grow your cloud business. If you want to be successful in the cloud, you need to work with Pax8.

Your Microsoft experts

Do it all in the Pax8 Marketplace

Our dynamic marketplace helps partners seamlessly deliver and manage cloud solutions. Quote, order, bill, and provision all of your cloud products in one place, with a single monthly invoice. And, with built-in data analytics and business intelligence, the Pax8 Cloud Commerce Marketplace provides the insights you need to optimize your margins and sell more.

Ordering

Buy Microsoft and other cloud products instantly from one place with the intuitive ordering workflow of the Marketplace.

PSA integrations

The Pax8 Cloud Commerce Marketplace integrates with Autotask, ConnectWise, Kaseya, Syncro, Tigerpaw, and RepairShopr – so you can manage everything from the convenience of your preferred PSA tool.

Instant provisioning

Our Marketplace integrates with Microsoft Partner Center – enabling automated, instant provisioning.

Managing clients

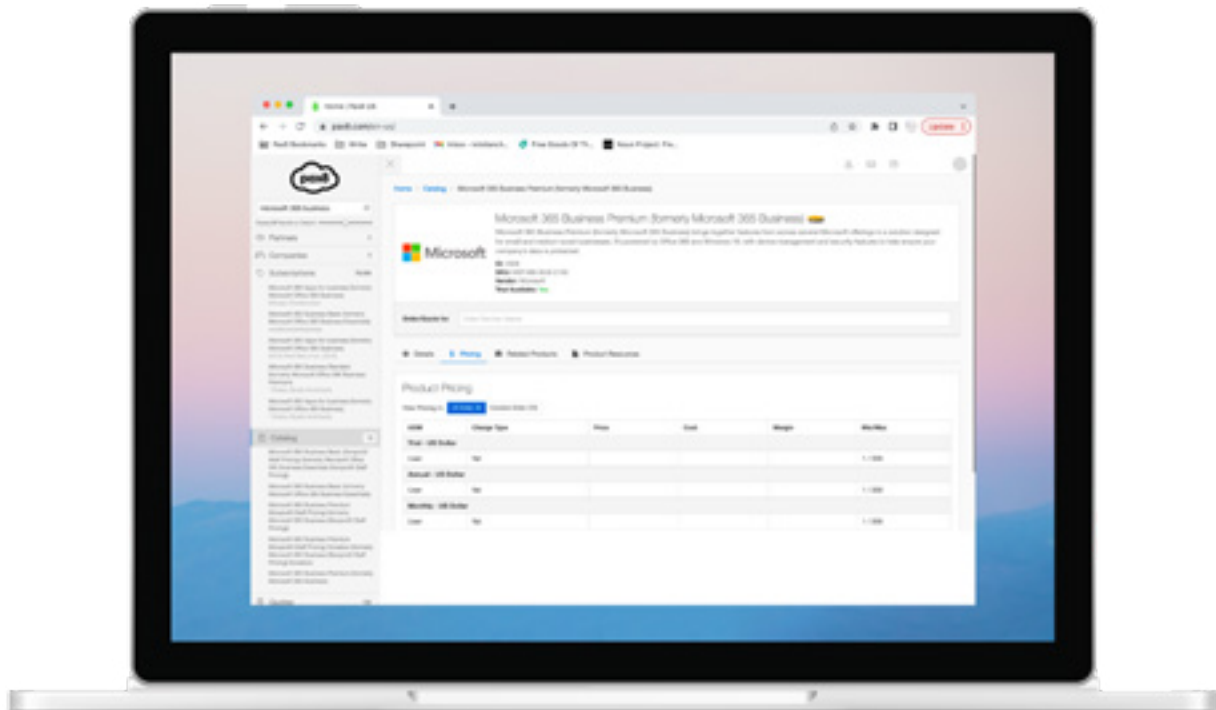

Get a comprehensive view of your entire Microsoft client base and manage their overall cloud tech stack within the Pax8 Cloud Commerce Marketplace.

Channel-focused cloud products

Build your complete tech stack, with leading vendors across productivity, infrastructure, continuity, and security.

Business intelligence

See targeted up-sell and cross-sell opportunities in your client base and identify gaps in your clients' technology stacks through data visualization.
