

Why Settle for Partial Protection? Actifile Delivers End-to-End Data Security.

Comprehensive End-to-End Data Security

- ✓ Data Discovery
- ✓ Data Encryption
- ✓ Data Loss Prevention (DLP)
- ✓ Real-Time Monitoring
- ✓ Cross-Platform Coverage

Why Piecemeal Solutions Fall Short

Threats evolve every day.

Fragmented solutions create gaps that put your clients at risk

Incomplete Coverage: Each tool focuses on only one piece of the puzzle—leaving blind spots in data tracking, encryption, or compliance.

Complex Management: Handling multiple vendors and tools is time-consuming, leading to inefficiencies in your MSP practice.

Higher Risk Exposure: Disjointed systems mean more potential for misconfigurations or integration failures, increasing vulnerability.

Protect, Track, and Comply with One Solution.

Future-Proof: Actifile evolves with new security challenges, keeping your clients protected against emerging threats.

Cost-Effective: One platform means less overhead, fewer vendors, and better ROI for you and your clients.

Simplified Compliance: Easily meet compliance requirements with built-in tools for documentation and audits.

Full Visibility: Track sensitive data across endpoints, networks, and cloud environments in real-time.

Comprehensive End-to-End Data Security

End-to-End Data Security

Actifile is not just another piece of the puzzle. It's the complete package—covering everything from data discovery to encryption, DLP, and monitoring.

Cloud Security Beyond the Basics

Microsoft DLP may protect your O365/SharePoint data, but what about data on file servers, local stations, or other cloud repositories? Actifile covers them all.

Encryption and Protection—Together

While BitLocker offers encryption, it doesn't secure data beyond that. Actifile ensures encryption plus a suite of security measures across your entire infrastructure.

Discovery Alone Isn't Enough

Tools like RapidFire and other point solutions discover data, but discovery without protection is only half the battle. Actifile combines discovery with robust security measures.

Seamless Integration

Actifile fits perfectly into your existing MSP toolkit, adding layers of protection that help your clients qualify for cybersecurity insurance—because compliance demands more than just discovery or encryption.

A True All-in-One Solution

Actifile ensures that all your data, whether in the cloud, on-premises, or hybrid environments, is fully secured. Why settle for 'instead of' when you can have it all?

**Equip your clients with the full spectrum of data security.
Choose Actifile for end-to-end protection that goes beyond the basics.**
