How HacWare Delivers Long-Term Value

HacWare

Protecting end users against phishing attacks

✓ **Early detection & reporting**: As the front line of your security system, employees can identify & report suspicious emails before harm is done

✓ **Understand evolving cyber risks**: Exposure teaches users how to identify & report the latest in phishing and scamming tactics

✓ **Empower users with education**: Knowing there role in their company's overall cyberhealth increases trust & personal accountability

Enhancing your customer's confidence

✓ **Demonstrate commitment:** Investing in cybersecurity training is a commitment to protecting clients' sensitive information

✓ **Build customer trust & loyalty:** The more of your clients who trust you with their data, the better your overall reputation & retention

✓ **Avoid an embarrassing breach:** No one wants to deal with the fallout from a data breach or wants to be responsible for losing client data

HacWare

Elevating your client's company resilience

✓ **Minimize impact on operations:** When IT teams have time to investigate threats, the effect on company operations is significantly reduced

✓ **Increase preparedness:** Being ready with an incident response plan allows quick action to be taken to minimize damage in case of a breach

✓ **Avoid expensive disruptions:** Recovering from an attack results in costly downtime, interrupting revenue generation, costing thousands to recover

Deliver long-term value today

HacWare's **innovative AI-driven phishing and security awareness training** can deliver long-term value for businesses by reducing the risk of successful attacks

By investing in cybersecurity training, organizations can **build a culture of security awareness** that can drive value for years to come.
