Guardz.

The Ultimate Cybersecurity Plan for MSPs

AI-Powered Unified Detection and Response across identities, endpoints, email, cloud, and data - featuring embedded SentinelOne®

Unified Detection & Response

Guardz streamlines cybersecurity management within a single platform. Enjoy the simplicity and efficiency of one dashboard, designed with a dynamic user-centric approach to provide seamless security operations.

EDR Best of Class

Guardz partnered with SentinelOne to bring real-time active endpoint protection directly into the Guardz platform. This ensures users benefit from advanced threat detection and response seamlessly consolidated across their endpoints.

MDR Transformed

Guardz MDR aggregates signals from multiple layers of security identities, endpoints, email, cloud and data into a user-centric analysis that detects even complex indicators of compromise and reacts to them automatically.

Guardz is redefining cybersecurity for MSPs and IT professionals with an AI-native detection and response platform that simplifies security management by unifying protection across identities, endpoints, email, cloud and data.
By incorporating SentinelOne's advanced EDR capabilities into a unified, user-centric engine, Guardz ensures automated detection, response, and remediation, that leverages best-in-class endpoint protection. This innovative approach reduces manual intervention, complexity, enabling, enabling swift threat resolution and empowering MSPs to deliver exceptional security to their clients.

Key Benefits

User-Centric Threat Management

Threats across all security controls are unified in the Guardz platform, aligned using a user-centric approach across identities, endpoints, email, cloud, and data. Guardz empowers MSPs to monitor and resolve incidents from a single interface, enhancing response times and reducing complexity.

Beyond Endpoint Protection

Deploy and manage SentinelOne agents directly through the Guardz platform, simplifying the provisioning, deployment and management of endpoint security. This experience eliminates the need to navigate and train on multiple interfaces, while offering superior protection against sophisticated threats.

AI-Powered Automation

Guardz MDR leverages multi-dimensional analysis to detect indicators of compromise across security controls. Powered by AI, it automates threat detection, mitigation, and resolution 24/7, eliminating manual intervention and enabling MSPs to focus on client needs while ensuring ideal security outcomes.

Here's What MSPs Can Expect

The Ultimate Plan builds on the Guardz platform's holistic, user-centric approach to security by incorporating managed SentinelOne capabilities with Guardz MDR.

1

Platform Configuration and Management

MDR simplifies the day-to-day configuration and maintenance tasks of managing SentinelOne.

- Policy Updates: Managing settings, block and allow lists across global customer bases.
- Monitoring Endpoint Health: Proactively ensuring devices are secure, operational and up-to-date with controlled rollouts.

2

Alert Triage

MDR leverages AI to manage and prioritize alerts, removing the burden of false positives and noise.

- Real-Time Alert Management: Ensures MSPs see only the most critical threats.
- Streamlined Workflows: Saves MSPs time by automating responses to routine notifications.

3

Incident Analysis

MDR goes beyond managing individual alerts by providing a deep analysis of security incidents.

- Global Insights: Looks across organizations to understand the broader impact of threats.
- User-Centric Connections: Links endpoint activity with other security layers, such as cloud behavior, awareness, leaked credentials, and email activity, for a complete view of risk.

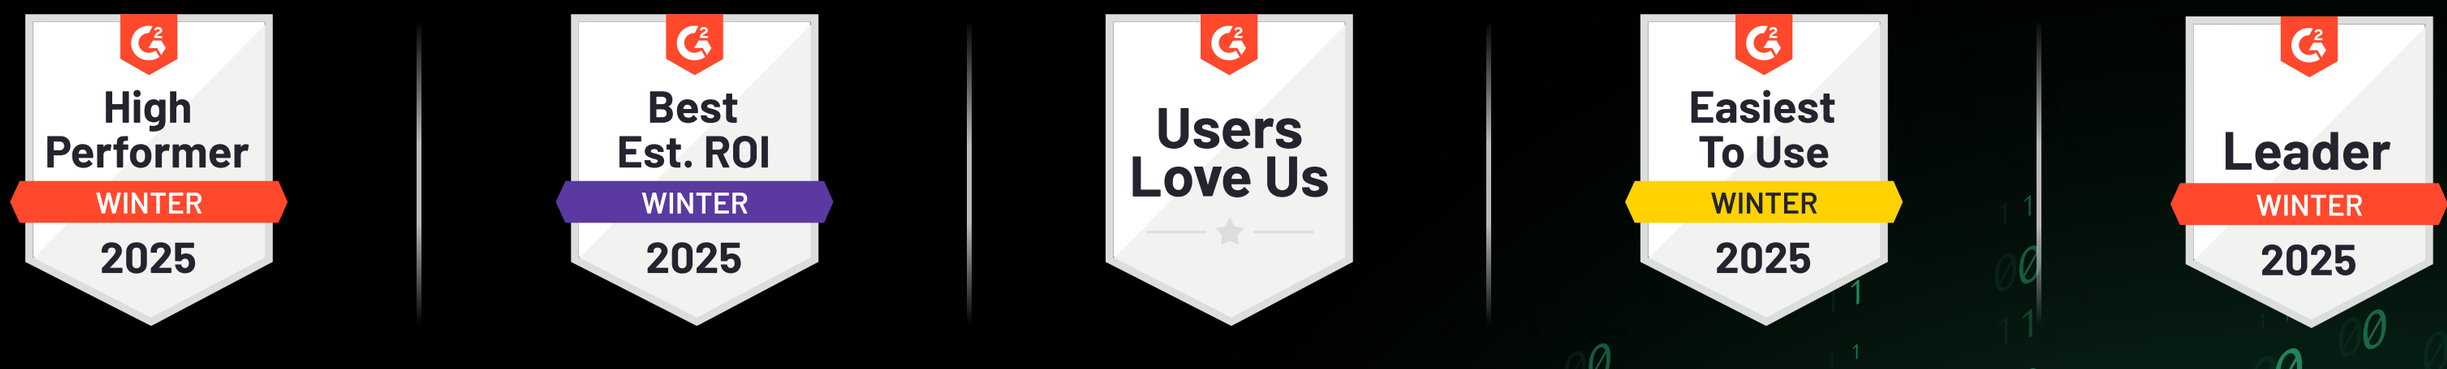

4

Incident Support

MDR facilitates direct, real-time engagement with a team of security analysts.

- Actionable Responses: Includes quarantining endpoints, blocking threats, and isolating risky users.
- Direct MSP Communication: Updates are delivered via phone, email, sms, and the Guardz platform for seamless collaboration during incidents.
