

# The MSP's Guide to Selling Backup

How to position backup, business continuity,  
and disaster recovery solutions to your SMB clients

# About this guide

This guide walks you through five steps to help your SMB clients understand the importance of getting started with backup and business continuity solutions, then closes with advice and resources to help you sell.

## Introduction

# There's a perception gap around the risk of data loss

---

You know that saying “you don't know what you've got 'til it's gone?” It can be hard to get SMB clients to grasp just how valuable and vulnerable their data is until it's been compromised. You aren't the only MSP struggling to convey the urgency of backup and business continuity solutions to clients who have an “it won't happen to me” mindset.

### **As an MSP, you recognize the threats to data...**

85% of organizations suffered at least one cyber attack in the preceding 12 months; an increase from 76% experienced in the prior year.<sup>1</sup>

### **... But most end clients aren't aware or prepared.**

66% of senior decision-makers at SMBs do not believe they are likely to be targeted by cyberattacks.<sup>2</sup>

That's why it's important to start a conversation about backup and business continuity solutions by illustrating to your clients that the threat of data loss is real and can hurt their businesses. It's why the best time to sell an umbrella is when it's sunny out. Once it starts to rain, it's already too late.

## Introduction

# Remote work and cybercrime: the one-two punch

---

### 1. The rush to enable remote work

The continued surge in remote work left IT teams scrambling to enable remote productivity. Which has resulted in a broader surface area in security vulnerabilities due to employees:

- Working outside the safety of the corporate firewall
- Using multiple devices, including sometimes using personal devices for work
- Connecting via potentially unsecure home networks
- Allowing family members to use work devices

### 2. A flood of COVID-related cyberattacks

By mid-2020, the FBI reported that cyberattack complaints were up by **400%**, Microsoft reported that pandemic-themed phishing and social engineering attacks jumped by **10,000 a day**, and cybersecurity experts reported that ransomware attacks were up by **800%**.<sup>3</sup>

### The result? Businesses were left bruised

The double whammy of a weakened security posture colliding with a flood of cyberattacks brought the consequences of data loss home to many companies.

**24%**

of surveyed IT leaders said they paid unexpected costs to address a cyber breach or attack following the move to remote work.<sup>4</sup>

**52%**

of MSPs reported that shifting client workloads to the cloud came with increased security vulnerabilities.<sup>5</sup>

## Painting the picture

# 1. Start the conversation with stories and stats

---

Tell real-life stories and use research statistics to tangibly illustrate the cost of data loss and downtime. Below are a few real-life stories from the field and research statistics that make the cost of data loss and downtime tangible. This can help drive home to your clients why backup and business continuity solutions are necessary, even for SMBs.

A Denver university's website, phone lines, email services, and online programs were shut down during summer finals and the start of fall semester due to a malicious cyberattack.

46% of all cyber breaches impact businesses with fewer than 1,000 employees.<sup>7</sup>

A small city in Florida had to pay \$460,000 to recover data and regain control of email and other servers that were seized in a ransomware attack.

Every minute of downtime costs an SMB around \$427.<sup>6</sup>

A healthcare center in Wyoming was hit by a ransomware attack that crippled most of its patient care systems.

84% of private sector organizations hit by ransomware reported that the attack caused them to lose business/revenue.<sup>9</sup>

55% of people in the U.S. would be less likely to continue doing business with companies that are breached.<sup>8</sup>

### Other MSP anecdotes about data loss causes:

"overheated server closet"

"actual fire inside a server"

"power surge during a storm"

"cat knocked external hard drive off a shelf"

## 2. Overcome objections

## Painting the picture

# 3. Explain the vulnerability of their data

---

Businesses of all sizes are under siege from an increasing volume and variety of cyberattacks. On top of malicious threats, there's also a wide range of accidental or uncontrollable ways your data can be lost or damaged. With so many possible risks to business data, it's clear that backup isn't optional anymore.

### User error

From accidental file deletion to overwriting to spilling coffee on laptops, user error is the primary cause of data loss.

### Ransomware attacks

Even if you pay a ransom, you're not guaranteed to get all of your data back.

### Other cyberattacks or breaches

From phishing to password attacks, network intrusions, and malware, there's a variety of ways bad actors try to gain access to or corrupt valuable data.

### Malicious deletion

There's a risk of angry employees on the verge of quitting or being fired purposefully deleting critical data out of spite or to cover their tracks.

### Employee turnover

Well-meaning departing employees sometimes try to "clean" their devices and file systems before leaving.

### Hardware failure

Hardware failures such as device or server crashes can lead to huge amounts of data loss.

### Device loss or theft

Mobile workforces increase the risk of lost or stolen laptops and smartphones that contain corporate data.

### Physical disasters and power outages

Fires and floods can destroy devices and servers, while power outages lead to data loss due to unsaved data or data corrupted by improper shutdowns.

Painting the picture

## 4. Explain the value of their data

---

A small business might think they don't have any data of value, but the truth is, any customer or employee data can have value to the right person. Personally Identifiable Information (PII) can fetch a large price on the black market, and of course, competitors will always be interested in learning sales, financial, and proprietary info.

### Data's resale value doesn't matter when it comes to ransomware

Ransomware attackers don't need to be able to monetize stolen data, they just need the victimized business to need their data back enough to pay up.

### How much is business data worth to bad actors?

**Credit card info**  
\$2 – \$5  
(per record)

**Customer PII**  
\$20 – \$450  
(per record)

**Employee PII**  
\$20 – \$450  
(per record)

**Medical records**  
\$20 – \$50  
(per record)

**Sales/financial info**  
Competitive value

**Proprietary info**  
Competitive value

Painting the picture

## 5. Cover industry-specific talk tracks

It's important to customize your backup/business continuity to any data protection needs specific to your client's industry. Here are a few talking points related to specific industries you can use to tailor your conversation.

 <p>Healthcare</p>	<p><b>Top Target</b> MSPs report healthcare as the most vulnerable industry in 2023.<sup>15</sup></p>	<p><b>Compliance fines</b> Healthcare organizations face hefty fines and penalties for HIPAA violations (fines can be in the millions).</p>	<p><b>Lives are at stake</b> Ransomware attacks have crippled hospital patient care systems.</p>
 <p>Financial</p>	<p><b>Vulnerable industry</b> Businesses in the financial industry experienced a 1,318% year-on-year increase in ransomware attacks.<sup>16</sup></p>	<p><b>#2 target</b> The finance industry had the second highest average cost per breach, trailing only health care.<sup>12</sup></p>	<p><b>Drop in share performance</b> Finance and payment companies saw the largest drop in share performance after a breach.<sup>17</sup></p>
 <p>Retail and hospitality</p>	<p><b>Lost sales</b> 66% of retailers paid the ransom after a ransomware attack due to threat of lost sales.<sup>18</sup></p>	<p><b>Vulnerable point of sale info</b> Most valuable info from hospitality businesses includes client information, passport information, and credit card numbers.</p>	

# 5. Cover industry-specific talk tracks

## State and local government

### Increasingly targeted

The rate of ransomware attacks in state and local government has increased from 58% to 69% year over year.<sup>19</sup>

### Ransom payments can be in the millions

In 2019, Lake City and Riviera Beach, FL paid \$1.1 million ransoms.

## Legal

### Not technical or prepared

22% of law firms did not have an organized plan in place to prepare for, prevent, or respond to data breaches.<sup>20</sup>

### Supply chain consequences

Food conglomerate, Mondelez, reported that the personal data of 51,000 of its current and former employees was compromised following a cyberattack on its law firm.<sup>21</sup>

### Potential for ethical violations

The potential for an ethical violation occurs when a lawyer does not undertake reasonable efforts to avoid data loss or to detect cyber-intrusion.

## Building your stack

# Solution definitions and comparison

	 <b>Backup and SaaS backup</b>	 <b>Business continuity (BC)/ Disaster recovery (DR)</b>	 <b>High availability</b>
<b>Overview</b>	<p>Provides a system for the backup, storage and recovery of digital files and folders. Typically collects, compresses, encrypts and transfers the data to the remote backup service provider's servers or off-site hardware on a recurring or continual basis. SaaS backup can back up cloud apps (e.g. M365, G Suite, SharePoint, etc.).</p>	<p>Hardware appliance that lives on-site to back up data, which is also backed up to the cloud in a remote location to reduce downtime and data loss.</p>	<p>Often heavily intertwined with BC/DR solutions. Provides resource availability in a computer system in the wake of component failures that disrupt access to data resources and critical business applications. Usually encompasses functionality such as virtualization and guaranteed recovery time windows.</p>
<b>Strengths</b>	<ul style="list-style-type: none"> <li>· Good entry-level point to start clients with backup</li> <li>· Affordable</li> <li>· No maintenance – files are backed up to the cloud automatically and regularly</li> <li>· Supports compliance</li> <li>· Reduces risk of data loss and mitigates potential damage from ransomware attacks</li> </ul>	<ul style="list-style-type: none"> <li>· Gets business back online after outages</li> <li>· Helps drastically eliminate downtime and data loss</li> <li>· Minimizes the interruption of critical processes</li> <li>· Mitigates potential damage from ransomware attacks and malware attacks</li> <li>· Supports compliance</li> </ul>	<ul style="list-style-type: none"> <li>· Protection from downtime</li> <li>· Real-time replication for more comprehensive protection than snapshots</li> <li>· Efficient, affordable remote data protection for off-site or total disaster recovery</li> <li>· Uses bandwidth-efficient replication to minimise the cost of remote data replication</li> </ul>
<b>Limitations</b>	<ul style="list-style-type: none"> <li>· Can take a long time to fully restore data</li> </ul>	<ul style="list-style-type: none"> <li>· Can be costly, depending on the type of BC/DR solution it can still take a while to restore data</li> </ul>	<ul style="list-style-type: none"> <li>· Can be costly, has more functionality than a lot of smaller businesses will need</li> </ul>

# Solution definitions and comparison

	 <b>Backup and SaaS backup</b>	 <b>Business continuity (BC)/ Disaster recovery (DR)</b>	 <b>High availability</b>
<b>Best for</b>	<ul style="list-style-type: none"><li>· Cloud backup is often used to back up laptops, desktops, and servers</li><li>· SaaS backup is used for protecting M365 clients, G Suite clients, and SMBs</li></ul>	<ul style="list-style-type: none"><li>· Clients with critical applications that need to be accessible within minutes or hours</li><li>· Clients in high-risk geo-locations (e.g., Southeast coast at risk of hurricanes), clients in compliance industries</li></ul>	<ul style="list-style-type: none"><li>· Clients whose business cannot tolerate any downtime or loss of access to critical data/apps</li></ul>
<b>Discovery questions</b>	<p>How much data do you back up?</p> <p>How often do you conduct backups?</p> <p>How long do your backups take to complete?</p> <p>What would be the impact if a backup or recovery failed?</p>	<p>Do you need to comply with industry regulations for data protection?</p> <p>Have you experienced ransomware attacks or are you worried about the threat?</p> <p>Have you ever had a failed recovery from an outage or disaster situation?</p>	<p>If you lost or couldn't access critical data, would you be out of business?</p>

## Building your stack

# Blending solutions to find the right coverage

---

It's imperative that clients protect their data and can quickly access that data when needed. Pax8 has best-in-class backup, business continuity, disaster recovery, and storage solutions from top vendors that you can layer and blend to find the right data protection coverage for your stack.

Finding the best fit for continuity solutions depends on a wide range of unique factors, such as:

Downtime tolerance

Backup frequency needs

Data volumes

Scalability

Reporting capabilities

Budget

## Selling the solution

# MSP Advice

---

### “Because Microsoft says so”

It can be eye-opening for Microsoft clients to learn that Microsoft themselves recommend third-party backup solutions. The Service Availability section of the [Microsoft Services Agreement](#) states:

*“We strive to keep the Services up and running; however, all online services suffer occasional disruptions and outages, and Microsoft is not liable for any disruption or loss you may suffer as a result. In the event of an outage, you may not be able to retrieve Your content or data that you’ve stored.*

**We recommend that you regularly backup your content and data that you store on the services or store using third-party apps and services.”**

### “...And the NIST Cybersecurity Framework agrees!”

As a gold standard of guidelines and best practices for managing and reducing cyber risk, the NIST Cybersecurity Framework is another great tool to demonstrate the critical importance of backup to your clients. Step five of the NIST Cybersecurity Framework is “recover” and includes backing up important data/info and scheduling incremental backups to make recovery from a data loss incident much less impactful.

#### Two powerful statistics to pull out of your back pocket

97% of organizations that had data encrypted got data back.

70% of those organizations used backup to do so.?

## Selling the solution

# MSP Advice

---

### Determine downtime tolerance

To identify the most appropriate business continuity solution for a client, it's important to establish their Recovery Time Objective (RTO) and Recovery Point Objective (RPO) to understand to what extent downtime and data loss affects their business operations.

- **RTO** is *how long* a business can tolerate downtime before facing consequences (such as lost sales, angry customers, frustrated employees, etc.)

- **RPO** is *how much* data a business can tolerate losing (measured in units of time back to the most recent backup. E.g., if you backup hourly, your business would only lose an hour of data)

Establishing a client's RTO and RPO can help you determine whether they need a light or intense backup solution (or BC/DR and high availability solutions with failover capabilities). Finding the right fit means that clients don't pay for more functionality and capabilities than they need.

### Focus on the bigger security picture

In today's aggressive and sophisticated cyberthreat landscape, cyber resilience should be the ultimate goal for all business IT strategies. No security tool is 100% foolproof. Backup should be the last line of defense of a multi-layered security approach so that when a breach does happen, your clients can quickly recover their data and keep business going.

The continuity conversation should be about more than just "you should back up your Microsoft files." Continuity should be presented as a critical component of a holistic cyber-resilience strategy that layers on tools and solutions to cover as many bases as possible, especially during an era of remote work.

## Selling the solution

# MSP Advice

---

### Take a page out of insurance companies' books

Present backup and continuity solutions along the lines of an insurance expense. Businesses purchase insurance for their building, employee health, and workers' compensation – continuity is like insurance for their data. The monthly cost of these solutions is pennies on the dollar compared to the potentially catastrophic cost of data loss, lost productivity, and lost revenue due to downtime, ransomware payments, and compliance fines.

### Build their business continuity solution stack over time

Don't overwhelm clients by trying to set them up with full BC/DR capabilities at the start. The easiest first step for an SMB to take to protect their data is to implement a third-party online backup solution that replicates data offsite in the cloud. As their business matures, you can then more naturally progress to more complex and costly BC/DR and high availability solutions if needed. The important thing is that your clients need to start somewhere to protect their data, so getting them covered by a cloud backup solution is a great first step.

### Don't forget to lead by example

Lastly, it's important that your MSP business has backup too! Not only is it critical to protect your business and client data, but to be a trusted advisor, you need to demonstrate that you practice what you preach. Additionally, using the backup and BC/DR solutions that you sell will give you authority to speak to their value and benefits with firsthand experience.

## Selling the solution

# Sample email templates

While Pax8 doesn't recommend blasting your entire client base, we do recommend sending an email to a targeted list of your clients who are a good fit for a backup solution. Below is one of the multiple sample sales email templates we've written that you can customize for use with your clients, which you can download in the resources section at the end of this guide. And as always, feel free to reach out to Pax8 for assistance.

### New email

To: **[Client email]**

---

Subject: **[Email Subject]**

---

Dear **[Client Contact First Name]**,

Did you know that Microsoft only keeps backups of your data for 30 days? If your emails or files are deliberately or accidentally deleted, but you don't realize until several weeks later, you won't be able to restore your data.

In fact, in the [Microsoft Services Agreement](#), they recommend using third-party backup services.

That's why, to protect your data, we recommend adding **[INSERT BACKUP SOLUTION NAME]** to your solution set, as it provides:

- **[INSERT SOLUTION FEATURE, e.g., "[X]-times daily backups of Exchange Online, SharePoint, OneDrive, Office 365 Groups, and Microsoft Teams"]**
- **[INSERT SOLUTION FEATURE, e.g., "Multiple bulk and individual restore options"]**
- **[INSERT SOLUTION FEATURE, e.g., "Highly automated migration services"]**

In today's digital economy, adding a backup layer is no longer an option if businesses want to truly keep their valuable data safe.

I'm happy to set up a call to discuss this with you and answer any questions.

We appreciate your business and strongly recommend taking this step to protect your cloud data.

Thanks,  
**[Signature]**

## Selling the solution

# Sample liability waiver templates

---

If, after you've explained all the reasons that you strongly recommend backup, you still have a client that refuses to pay for a backup solution, you should consider protecting yourself by requesting they sign a waiver in which they acknowledge that they are declining backup coverage against your advice. Sending this waiver can also be a wake-up call for stubborn clients to realize how critical backup coverage is to protect against data loss. Below is a sample Backup Coverage Liability Waiver.

Please note: *This is a SAMPLE waiver only. Pax8 is not responsible for ensuring the legality or accuracy of the language in the text below. Always run any legal documents such as a waiver past your legal team for approval before distributing.*

### Voluntary Waiver of Backup Coverage

Date: \_\_\_\_\_

Client: \_\_\_\_\_

Reseller X Advisor: \_\_\_\_\_

This form is notice that the Client hereby acknowledges that they were informed by their Reseller X Advisor about the potential need and availability of cloud backup coverage. By signing this document, the Client acknowledges that they have decided to waive their right to purchase cloud backup coverage.

The Client also acknowledges that this is against the advice of their Reseller X Advisor and that by signing this document they are releasing any liability of the Reseller X Advisor by any and all parties who have or may have right to bring claim against any party with regard of the Client's decision to voluntary decline cloud backup coverage.

The Client fully acknowledges that they have reviewed this document, and they understand the effect of declining cloud backup coverage against the recommendation of the Client's Reseller X Advisor.

The Client understands that if they add cloud backup coverage later, the price and options for coverage may change for various reasons.

Client Signature: \_\_\_\_\_ Date: \_\_\_\_\_ Reseller X Advisor Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Client Name (Printed): \_\_\_\_\_ Reseller X Advisor (Printed): \_\_\_\_\_

Your continuity experts

# Putting it all together

---

It is absolutely vital that your SMB clients have business continuity in place. However, we know that many SMBs don't quite get that having backup is just as important as having cybersecurity. Pax8 is here to help you have those conversations with your clients and build the continuity stack that's best for you and your clients.
