Defens

Hassle-free AI for SMEs

THE CHALLENGE

Small and mid-sized enterprises (SMEs) risk losing market share as larger competitors unlock AI-driven efficiency gains. Yet most SMEs struggle to translate the promise of AI into measurable productivity: traditional roll-outs take weeks, demand specialist skills, and saddle budgets with five-figure invoices—adding yet another dashboard employees ignore.

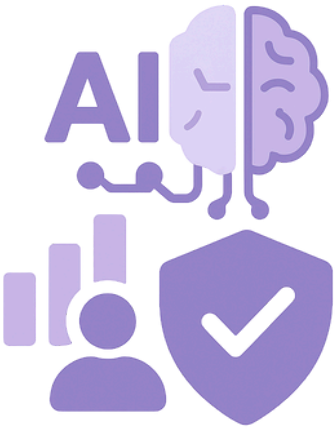

THE SOLUTION : Nexi AI "Your Data Your Agent"

Nexi AI rides on the DefensX secure browser for **truly hassle-free adoption**: one-click enablement locks in secure data integration, unleashes enterprise-grade LLM power within seconds, and starts quantifying ROI immediately all at zero integration cost to SMEs.

ZERO CLICK INTEGRATION

Data foundation: Secure browser logs (URL, title, dwell-time), login telemetry, file flows, AI prompt/response stream; all encrypted and consent-controlled.
LLM reasoning layer: Nexi transforms raw telemetry into business context: tasks, workflows, and opportunity gaps.
Multimodal outputs: Real-time chat answers, dashboards, weekly PDFs, and scheduled digests—mapped to KPI owners.

SECURITY & PRIVACY ASSURANCES

Zero-Trust Enclave: Data inspected and stored inside DefensX's secured browser container.
Enterprise-Controlled Consent: Enterprise grants scope-limited access; prompts & responses encrypted at rest.
No Model Retraining: Proprietary data never used to train external LLMs; inference-only access.
Audit-Ready: All outputs mapped to SOC2, GDPR, NIS2 evidence artifacts.

AI With An Immediate ROI

By embedding AI directly in the browser workspace, Nexi turns adoption targets into measurable productivity wins without the delays, costs, or complexity of traditional AI projects. SMEs gain a 90-day payback, employees reclaim hours, and leadership sees clear, real-time progress toward strategic efficiency goals.

Defens

Hassle-free AI for SMEs

IMMEDIATE SOLUTIONS: PRODUCTIVITY, AI ADOPTION & SECURITY

Nexi delivers measurable impact from the very first session. Within 24 hours Nexi surfaces productivity gaps and benchmarks team-by-team AI adoption; from the very first prompt it also inspects every LLM request and response inside the browser, redacting PII and source code before it can leave. In short, **Nexi uses AI to police AI**; stopping data exfiltration while delivering rapid, measurable efficiency gains.

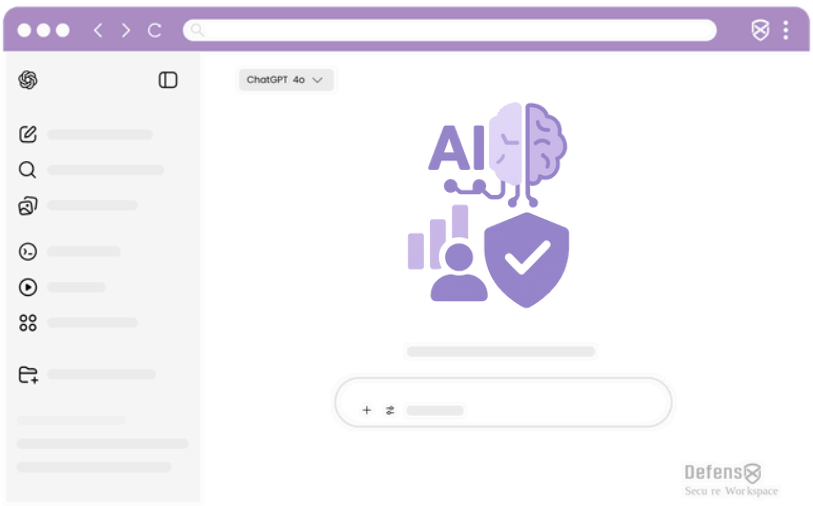

PRODUCTIVITY MONITORING

Time-on-Task Heat-maps: Spotlight the top distraction sinks per team, within the first 24 hours.
Productivity Monitoring & Trends: Real-time dashboards track focus ratios, context-switch counts, and productive hours per team delivering week-over-week trend-lines for managers to act on.

AI ADOPTION TRACKING

Baseline Dashboard: Live view of the percentage of workflows that touch AI, broken down by role and department.
Smart Training Push: Auto-enrols low-usage employees into bite-sized AI up-skill paths and tracks completion.
ROI Projection: Continuously forecasts hours saved and licence costs avoided against the original baseline.
