Redefining Your Browser as a Secure Digital Workspace

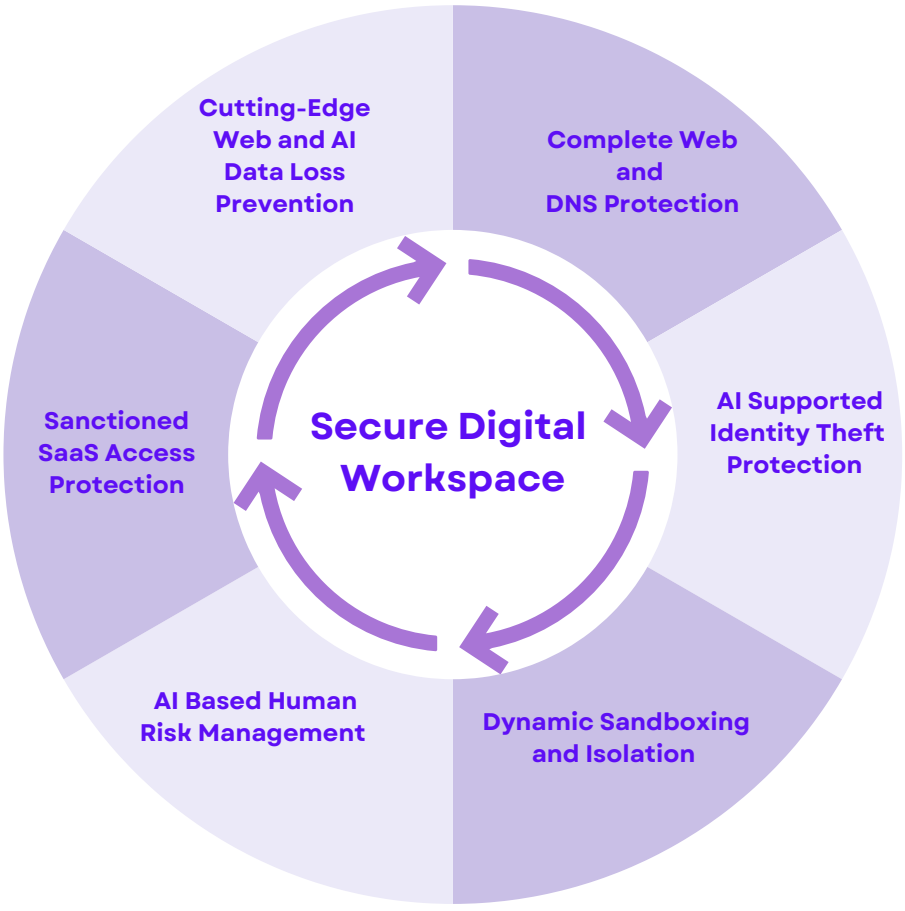

In today's world - everything we do revolves around the browser. As the workforce moves beyond the bounds of traditional offices and with critical business applications and data racing to the cloud, the browser remains at the heart of the modern workspace.

However, advanced web threats and constantly evolving security and compliance standards have outpaced legacy security solutions, leaving the modern workspace vulnerable to web-based cyber and identity attacks *or* forced to implement a solution that disrupts the natural workflow and requires changes to end-user behavior.

DefensX is rewriting the rules for MSP's and organizations globally by turning your go-to browser into a secure and cost effective digital workspace paired with robust Web Data Loss Protection and AI Data Protection- all without requiring you or your user to change a thing.

Gone are the days of bolted-on solutions with catch-22s. Welcome to the new era of DefensX.

Capabilities Designed For The Modern Workspace

Redefining Your Browser as a Secure Digital Workspace

Engineered for MSP's Efficiency

By dynamically filtering content and files while simultaneously guarding every session, user and credential across the web, ***MSPs can boost efficiency, effortlessly scale, and exceed enterprise-level security standards—all with complete DNS protection for legacy operating systems.***

20%

DefensX reduced MSP's cost of managing their customers digital workspaces by 20%

30%

MSPs using DefensX improved their average cyber resiliency by 30% in the first 6 months

40%

MSPs using DefensX improved their users password hygiene by 40% in the first 6 months

Web Browser + DefensX = The Fastest, Most Cost-Effective Solution for a Secure Digital Workspace

Web and DNS Protection	Categorize URLs into 200+ groups with risk scores based on policy settings. Instead of just allowing or blocking, DefensX offers options like Isolate, Read Only, No Action, or Block, tailored for each user.
AI Supported Identity Theft Protection	Control if users can enter credentials on a website, based on policy. Since 80% of data breaches involve credentials, this feature dynamically prevents unauthorized logins and keeps your business secure.
Web and AI Data Loss Prevention	Prevent users from taking or accidentally leaking sensitive and confidential data out of the digital workspace.
AI Based Human Risk Management	Get automated access to detailed human risk and vulnerability reports that empower MSPs and organizations worldwide to effortlessly achieve Zero Trust and cyber resilience.
Sanctioned Saas Access Protection	Seamlessly protect from session jacking and phishing attacks while ensuring users have access to important saas applications on the go.

💡 ***Fun Fact: MSPs can fully deploy DefensX in under 2 minutes***
